

# THE QUESTA PROJECT

---

DESIGNED BY MARTIN MAJOOR & JOS BUIVENGA (EXLJBRIS)

# The Questa Project

by Jos Buivenga & Martin Majoor

**T**HE QUESTA PROJECT is a type design project by Dutch type designers Jos Buivenga and Martin Majoor. Their collaboration began in 2010 using Buivenga's initial sketches for a squarish Didot-like display typeface as a starting point. It was a perfect base to apply upon Majoor's type design philosophy stating that a serif typeface is a logical starting point for creating a sans serif version and not the other way around. The extensive Questa family includes serif, sans and display typefaces.

## Questa, a serifed typeface

First of all the text version of the Questa super family had to be designed, not in the least to serve as a base for both the sans and the display version. Typefaces like Didot, Bodoni and Walbaum were reviewed and some characteristics were used as rough guidelines for the design. To prevent Questa's shapes from getting too clean and too sharp, several features – not typical for Didot-like typefaces – were considered. The goal was to not make a revival of any of these three, but rather an original typeface.

The contrast within Questa's characters is relatively high. At the same time the thin parts and the unbracketed serifs are strong enough to prevent the characters from breaking open. Modern digital revivals of Didot-like typefaces are often really thin, even compared to the original printed metal typefaces from around 1800.

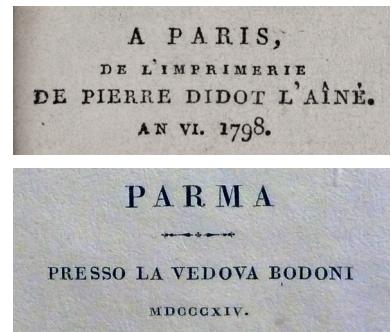

Questa

qafligez

*The initial sketches of Questa.*

*Questa belongs to the group of Didot-like neo-classic typefaces.*

*Didot and Bodoni in metal type.*

Questa doesn't have the typical ball terminals that can be seen in most Didot-like typefaces. Instead its shape is a teardrop terminal with a sharp-pointed ending. The proportions between x-height, capitals and ascenders/descenders are very much adapted to present-day needs. This means, compared to Didot, the x-height of Questa is rather big and the capitals are small. The inclusion of small caps, four sets of figures, ligatures and extended language support makes Questa a real workhorse typeface.

# HH XX

**Questa** has smaller capitals and a larger x-height than Didot, making it better adapted to present-day needs.

## *Capitals*

## *Small caps*

### *Lowercase*

## Ligatures

## *Lining and lowercase figures*

## *Extended language support*

The italic of Questa – compared to a typeface like Didot – is more upright and less constructed. Terminals and serifs of the italic are treated in the same way as the roman to ensure that both styles will work together when mixing them.

# *Harlequin Synchronize Voltage*

## *Harlequin Synchronize Voltage*

### *Didot Italic*

**Questa Italic: more upright, less constructed**

However, there is room for several style elements that can be traced back to the Humanist or handwritten letterforms. This makes it difficult to classify Questa italic, it is in fact far removed from the typical Didot-like italic style.

J¶ aak vv GG YY

In *Questa Italic* there are several style elements that can be traced back to the Humanist or handwritten letterforms.

The numbers in Questa italic have a clearly different contrast than the ones in the roman. Where the stress in the roman shapes is in the vertical parts of the numbers, in the italic this is reversed, very much like can be seen in the lowercase ‘z’ of roman and italic.

The strong text colour of both roman and italic makes Questa extremely suitable for print as well as for use on screens. Questa comes in five weights in both roman and italic:

**z 235679**

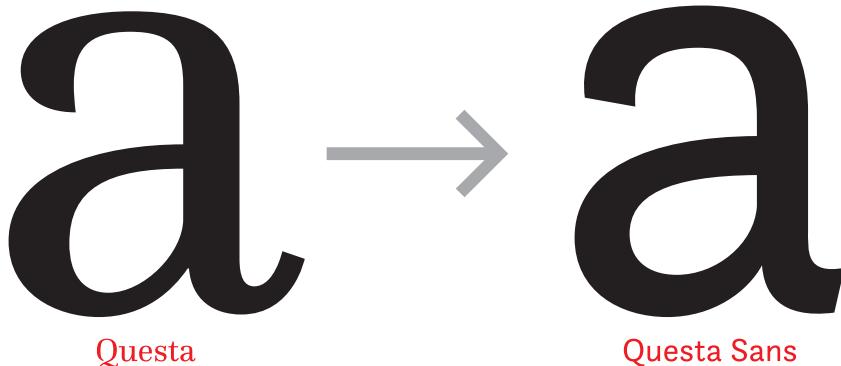

**z 235679**

*Reversed contrast in the numbers of  
Questa Italic, similar to the lowercase z.*

*Light Regular Medium **Bold Black** SMALL CAPS 256 256 fk ffi*

## Questa Sans

From the start of their collaboration Buijenga and Majoor intended to design a sans serif counterpart that would simply be based on the shapes of Questa serif.

*Questa Sans is simply based on Questa.*

In developing the sans there was no room for ‘niceties’ or ‘handsomeness’. The way the sans was going to look like was a logical outcome of the process of cutting away the hairline serifs, changing the contrast and optically correcting its shapes.

Change  
Change **ang**

*Questa Sans was derived by cutting away the serifs, changing the contrast and optically correcting its shapes.*

Ultimately the whole process of deriving a sans from Questa serif resulted in a typeface much in the spirit of the first serious sans text faces, like Akzidenz Grotesk.

In this context the history of Akzidenz Grotesk is quite interesting. It was created shortly before the year 1900 as one of the first mature sans serifs and suitable for setting large amounts of texts. Given the fact that before that time there was hardly any serious sans serif, it could be assumed that Akzidenz-like typefaces were more or less based on the serifed text faces that were fashionable at the time, like Walbaum and Didot.

*Akzidenz Grotesk could have been derived from the group of Didot-like classicistic typefaces, whereas Helvetica and Folio just imitate Akzidenz Grotesk.*

This is exactly the path that has been followed during the design process of Questa Sans: from a (neo)classic serifed typeface to a modern sans, rather than imitating existing sans typefaces.

# Harlequin

Akzidenz Grotesk (1898)

# Harlequin

Helvetica (1957)

# Harlequin

Folio (1957)

# Harlequin

Questa

# Harlequin

Questa Sans

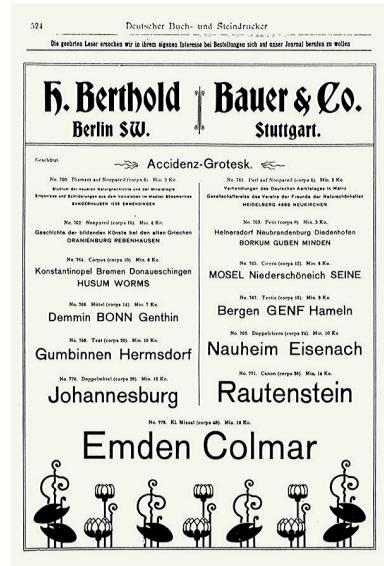

In comparison: typefaces like Folio or Helvetica – both made in 1957 – have not been based on a serifed typeface. Instead they were commissioned as an immediate response to the highly popular Akzidenz Grotesk. Helvetica became a quite literal imitation, a sans that was based on a sans.

Questa Sans, in contrast, simply bases its shapes on its serifed counterpart. In this way most of the identity and personality of Questa Sans originates from Questa serif.

Where the italics of *serifed* typefaces are considered a fully-fledged member of the typeface, it is unclear why the italic shapes of most *sans* typefaces are so underestimated. Little has been done to distinguish them from the roman, apart from the fact that they are heavily sloped.

Aa Ee Gg Kk Qq Rr Vv Yy  
Aa Ee Gg Kk Qq Rr Vv Yy

In contrast, the italic of Questa Sans has been based on the italic of its serifed counterpart, which results in a ‘real’ italic. The whole construction is essentially different than that of the roman. The angle is not more than 8°, better than the 13° to 16° that most sloped typefaces need.

Advertisement from 1899,  
announcing ‘Accidenz-Grotesk’.

The italic of Akzidenz Grotesk is not more than a sloped roman. To be able to distinguish itself from the roman it needs an angle of no less than 13°.

Questa Sans is based on the ‘real’ italics of Questa. They have a slope of not more than 8°.

Harlequin Synchronize Voltage  
Harlequin Synchronize Voltage

Because Questa Sans shares its basic forms with Questa, they can be perfectly combined. Questa Sans comes in 5 weights in both roman and italic, including small caps, four sets of figures and ligatures:

## Questa Grande

The third version of the Questa Project is called *Questa Grande*. It is based on the text version of Questa. This display or headline typeface, with its very thin hairline serifs, is designed in the spirit of the best work of Firmin Didot and Giambattista Bodoni.

*Questa Grande is simply based on Questa.*

*Examples of types by Firmin Didot (1819)  
and Giambattista Bodoni (1818)*

Where the text version of Questa has an almost workhorse-like quality, Questa Grande is extremely elegant and refined in detail. The sharp-pointed teardrop terminals that can be found in Questa have been replaced by a crescent-like shape. The light parts and hairline serifs are unquestionably thin, and interestingly in all weights of Questa Grande the thin parts will have exactly the same thickness.
